The IDS's of 2/13/04 and 4/1/04 list US application numbers. Since a US application is not prior art these items have been lined through on the PTOL-1449 by the examiner.

Applicant's remarks concerning the election of species requirement have been given careful consideration. In particular applicant's contention that "large number of subclasses can be searched without additional burden by electronic searching without substantial burden" is found to be unsound reasoning. The burden for searching a subclass whether by paper searching or by electronic searching is an identical burden since the same number of patents in a subclass must be searched with either method. In the instant case because of the mutually exclusive characteristics of the two distinct species additional subclasses must be searched for each species hence the multiple species in this application present a substantial burden to the Office. The restriction requirement is deemed proper and is hereby made FINAL.

In claims 6 and 19 the use of quotation marks is improper. Revision of these claims is required to eliminate the quotation marks.

Claims 1-6 and 15-22 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1, line 5 the phrase "worm to be driven" is vague and indefinite. It is unclear whether or not a worm driving means is being claimed. If a worm driving means is not being claimed then the claim does not present a complete operative

device since the subsequent "contact of the clamping arm with the workpiece" could not take place.

Claims 7-14 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected species, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on 9/12/05.

Lovrenich is cited to show an analogous worm driven clamp.
